

FAHAD AZAM

Database Engineer | Cloud Database Administrator

azamfahad611@gmail.com • +91-8902471242 • Hyderabad, Telangana
github.com/fahad-azam • linkedin.com/in/azamfahad • fahadwrites.xyz

Professional Summary

Database Engineer with 4+ years of experience designing, automating, and operating mission-critical Oracle and PostgreSQL environments across AWS, OCI Exadata, and on-premises infrastructure. Combines deep DBA expertise — Data Guard, RMAN, HA/DR — with hands-on cloud automation using Terraform, Shell scripting, and AWS-native services (RDS, CloudWatch, Lambda, SSM). Reducing manual operations through scripting and building production-grade infrastructure from scratch. AWS Certified Solutions Architect | OCI Certified Associate

Certifications & Achievement

AWS Certified Solutions Architect – Associate *Valid till May 2027*

OCI 2025 Certified Foundations Associate *Valid till Nov 2028*

Accenture ACE Award — Recognized for outstanding individual contribution to the client Twice

Work Experience

Cloud Database Engineer | Accenture

Hyderabad | Aug 2023 – Present

Client: A leading Fashion Brand from US

- Operated 50–100 Oracle, PostgreSQL, and Redis databases across AWS RDS, OCI Exadata, DBaaS, and on-premises — covered provisioning, patching, backup, and recovery on a monthly cycle.
- Executed 4+ Oracle Data Guard switchover and failover operations; resolved standby sync gaps using incremental roll-forward and SCN-based recovery, keeping replication lag within acceptable thresholds.
- Completed Oracle DBaaS 12c to 19c upgrade in OCI within a 3–5 days window — handled pre-upgrade checks, rollback planning, execution, and post-upgrade validation end to end.
- Built centralized RMAN backup framework using 4–5 Shell scripts — replaced per-database manual scripting with a single parameterized entry point covering full, incremental L0, archivelog, and maintenance modes.
- Migrated 5 Redis clusters from RHEL 7 to RHEL 8 in production with no downtime — sequenced node-by-node failover and validated replication health before each cutover.
- Wrote and owned 8–10 Shell scripts for automated DBA health checks and diagnostics on Oracle Linux and RHEL — set up Grafana and Prometheus dashboards with threshold alerts for prior issue detection.

Oracle Application Database Administrator | Cognizant

Pune | Aug 2021 – Aug 2023

Client: A Renowned Insurance and Banking Institute

- Administered 10+ Oracle databases on OCI and AWS for PeopleSoft application stacks — managed connectivity, access controls, and monthly patching cycles across dev, test, and production environments.
- Performed 3 database refreshes per month (60+ during tenure) — cloned production data to lower environments to support application team deployments and release cycles.
- Remediated 20+ vulnerabilities across database and middleware layers — coordinated fixes across teams and tracked each item from identification to closure within compliance deadlines.
- Wrote Shell scripts to automate recurring DBA tasks — reduced manual steps in daily operations and improved consistency across environments.
- Applied WebLogic and JDK patches on schedule; renewed SSL certificates before expiry — kept PeopleSoft application stack secure without service interruption.

- Triaged and resolved database and middleware incidents within SLA — documented root causes of recurring issues to reduce repeat incidents over time.

Projects

Multi-Region High-Availability AWS Infrastructure *Terraform / AWS* [\[GitHub\]](#)

- Architected layered Terraform infrastructure across networking, IAM, storage, application, database, and DNS layers — fully parameterized for dynamic primary/standby deployment across regions via variables.
- Provisioned custom VPCs, public/private subnets, NAT instances, VPC peering, ALBs, Auto Scaling Groups, PostgreSQL primary/standby RDS, and S3-backed application delivery.
- Implemented AWS Systems Manager Parameter Store and Lambda-based workflows for automated failover/failback, configuration replication, and standby replica rebuild — demonstrating real-world DR and regional resilience.

RMAN Backup Automation Framework *Shell Script / Oracle RMAN* [\[GitHub\]](#)

- Production-grade RMAN automation supporting full, incremental L0, archivelog, and maintenance modes — driven by a single parameterized entry point with per-database config injection and dynamic multi-channel allocation.
- Built concurrency protection via lock files, trap-based cleanup, failure email alerting, and automatic post-backup RMAN crosscheck with obsolete/expired backup purging.

TECHNICAL SKILLS

DATABASES	Oracle 12c / 19c / 21c • PostgreSQL • Redis • Exadata (OCI) • Oracle DBaaS
CLOUD PLATFORMS	AWS (RDS, CloudWatch, Lambda, SSM, VPC, ALB, ASG, S3) • OCI
HA & RECOVERY	Oracle Data Guard, RMAN, Switchover / Failover, SCN-based Recovery, Replication
AUTOMATION & IAC	Terraform (multi-region, layered), Shell Scripting, AWS Lambda, Systems Manager
MONITORING	Prometheus, Grafana (dashboards, alerts, metrics) • Database observability
OTHER	WebLogic / JDK Patching, SSL Management • Performance Tuning • Incident Management • SLA/SLO/SLI

EDUCATION

Bachelor of Technology – Applied Electronics

Techno International New Town, Kolkata
